1. Introduction

1.1 Project Overview

The **GIFT City Connect Portal** is a centralized, web-based platform designed to be the definitive digital ecosystem for **Gujarat International Finance Tec-City (GIFT City)**. It aims to connect visitors, businesses, property owners, and administrators by providing a unified source of information and services. This includes listings for companies, offices, residential and commercial properties, educational institutions, and business support services.

1.2 Scope & Objectives

The primary objective is to build a robust, scalable, and user-friendly platform that simplifies the discovery and management of resources within GIFT City.

-  **Discovery** – Enable users to easily search and filter for businesses, properties, and services.
-  **Listing Management** – Provide authenticated users (Business/Property Owners) the ability to manage their own listings.
-  **Connectivity** – Facilitate communication between service providers and potential clients/customers via contact forms and enquiry management.
-  **Administration** – Provide a powerful dashboard for the platform administrator to manage content, users, and monitor activity.

1.3 Target Audience

-  **Visitors** – Individuals exploring GIFT City for work, living, or investment opportunities.
-  **Business Owners** – Companies looking to establish a presence, promote their services, or find office space.
-  **Property Owners** – Individuals or firms with residential or commercial property to list for sale or rent.
-  **Administrators** – Platform managers responsible for maintaining the integrity and quality of data.

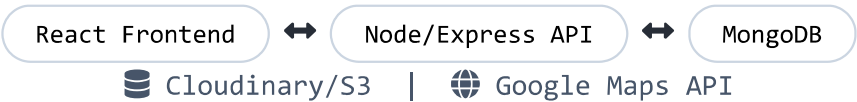

2. Overall System Description

2.1 Technology Stack

 React.js  Node.js Express.js  MongoDB JWT Auth  Cloudinary/AWS

 Google Maps

2.2 System Architecture

2.3 User Roles & Permissions

Role	Permissions
Visitor	View public listings, search/filter, send contact enquiries.
Business Owner	Create, edit, delete own company/office listings; respond to enquiries.
Property Owner	Create, edit, delete own residential/commercial property listings; respond to enquiries.
Admin	Full CRUD on all modules; access to admin dashboard with analytics and user management.

3. System Features & Modules

 Companies & Offices

 Residential Properties

Comprehensive directory of companies and office spaces. Search by name/industry, view detailed profiles, and map locations.

Apartments, flats, and houses. Filter by location, price, BHK, and amenities. High-res images and direct owner contact.

Commercial Spaces

Retail shops, warehouses, land plots. Zoning info, utilities, and rental terms. Map-based visualization.

Schools & Education

Educational institutions with curriculum details (CBSE, ICSE, IB). Filter by board, grade level, and location.

Business Support

Marketplace for legal, accounting, IT, HR, and catering services. Profiles with direct enquiry/booking.

✓ 4. Functional Requirements

4.1 Core Features

- **Global Search** – Powerful search bar indexing all modules.
- **Advanced Filters** – Refine results by category, price, location, amenities, ratings.
- **Interactive Maps** – Listings shown on map; click pins for summary cards.
- **User Registration/Login** – Secure JWT-based authentication.
- **Responsive Design** – Optimised for desktop, tablet, and mobile.

4.2 Admin Dashboard

- **Content Management** – CRUD operations on all collections.
- **User Management** – Activate, deactivate, or delete user accounts.
- **Analytics Dashboard** – Visual reports on views, user growth, enquiry traffic.
- **Report Generation** – Export reports on listings and user activity.

4.3 User Interaction

- **Contact Enquiry** – Form on listing pages to message owners.
- **Listing Management** – Authenticated users can add, edit, remove own listings.
- **Review System** – Users can leave ratings and reviews (admin-moderated).
- ✓ **Highlight:** All core features are designed to ensure a seamless user journey from discovery to conversion.

5. Non-Functional Requirements

5.1 Performance

Requirement	Target
Page Load Time	≤ 3 seconds (landing & listing pages)
Concurrent Users	Support ≥ 1,000 concurrent users
Scalability	Horizontal scaling via load balancers

5.2 Security

- **Authentication** – All protected endpoints require valid JWT.
- **Input Validation** – Server-side validation to prevent injection attacks.
- **Password Hashing** – Using bcrypt (salt rounds ≥ 10).
- **Media Security** – Temporary access tokens for private files.

5.3 Usability

- **Intuitive UI** – Clean, modern design with minimal learning curve.
- **Accessibility** – Reasonable compliance with WCAG 2.1 AA.
- **User Feedback** – Clear loading states, success/error messages, and tooltips.

 **Note:** Security and performance are non-negotiable priorities for production deployment.

6. Database Collection Schemas

All collections are designed to support scalable, query-efficient operations. Key fields are indexed for fast lookups.

Collection	Key Fields
Users	<code>_id</code> , name, email (unique), password (hashed), role (enum), profileImage, createdAt
Companies	<code>_id</code> , name, logo, description, industry, website, contactEmail, location (GeoJSON), userId (ref)
Offices	<code>_id</code> , companyId (ref), title, area (sq ft), rent, availability (bool), images
ResidentialProperties	<code>_id</code> , ownerId (ref), propertyType, bedrooms, bathrooms, price, location (GeoJSON)
CommercialProperties	<code>_id</code> , ownerId (ref), propertyType, area, price, zoning, location (GeoJSON)
Schools	<code>_id</code> , name, board, gradeLevels (array), address, phone, website
BusinessServices	<code>_id</code> , category (enum), title, description, providerId (ref), contactInfo
ContactEnquiries	<code>_id</code> , listingId, senderEmail, senderName, message, isRead

7. Future Scope & Roadmap

 AI Chatbot

 Mobile App

 Property/Office
Booking
